

## Safil®

### Absorbable Sutures

#### Description

Safil® is a mid-term braided and coated synthetic absorbable suture made of pure polyglycolic acid. Safil® degrades by hydrolysis and provides predictable and reliable absorption.

#### Advantages

- High tensile strength
- Excellent knotting ability
- Smooth passage through tissue
- Easy handling

#### Indication

- Gastrointestinal surgery
- Gynaecology/obstetrics
- Ophthalmic surgery
- Orthopaedics
- Urology
- Skin closure (intra, sub, skin)
- Neurosurgery
- Ligatures

#### Properties

- Retention of 50% knot tensile strength after 18 days
- Complete mass absorption in 60 to 90 days

#### Note

Sizes available USP 10/0 (0,2 metric) to USP 2 (5 metric)
